

KEY-PRO®

PERFORMANCE SOFTWARE

New User Friendly, Graphical-Interface Application Unlocks the Potential of the KeyWatcher® Key Management Systems

Morse Watchman, the Most Recognized Name in Security Management Products, introduces their brand new Key-Pro Performance Software for use with their KeyWatcher Key Management Systems (KWIS, KWII). Key-Pro enhances the installing, programming, customizing, maintaining and reporting capabilities. By utilizing this new software, systems managers will benefit from faster and easier KeyWatcher functionality.

EXCLUSIVE TRANSACTION POLLING

This compelling feature has a built-in scheduler that automatically downloads all KeyWatcher data to centralized or remote computers. As a result, transaction and alarm information is viewable in real-time via Key-Pro's graphical interface.

BI-DIRECTIONAL SYNCHRONIZATION

Key-Pro's exclusive Auto-Sync function lets systems managers easily customize their own programming modifications using an ordinary PC. Benefit from bi-directional synchronization of KeyWatcher data at anytime from multiple locations.

MAXIMIZED NETWORK CAPABILITIES

Systems managers at different PCs may administer multiple KeyWatcher systems, even ones from remote locations. The software's database may be installed on a shared network drive, permitting key management reports to be generated from remote computers.

EXTENSIVE KEY MANAGEMENT REPORTING

Systems managers will appreciate being able to administer more specifically detailed KeyWatcher reports with less time and effort than ever before. These reports can be generated based on specific key, user and alarm transaction. Key-Pro provides comprehensive reporting with extended sorting methods, including delineation by last name, first name, ascending and descending sequential order.

LOCAL AREA NETWORK ACCESS

Accessibility to the key management systems over a LAN has been upgraded, enabling systems managers to perform functions on any KeyWatcher via a TCP/IP.

If you are currently using a previous version of KeyWatcher software, please contact your area Morse Watchman representative immediately to upgrade to the enhanced Key-Pro Performance Software.

"We designed the Key-Pro Performance Software specifically for systems managers to maximize the effectiveness of their KeyWatchers. It allows our clients to account for their facility keys much more efficiently."

- JOSEPH GRANITTO, Service Manager for Morse Watchman

"Key-Pro is the most powerful software we've made to date. It answers all of our KeyWatcher clients' needs, from direct or Internet connections to modems to LAN."

- FERNANDO PIRES, Director of Sales and Marketing for Morse Watchman
