

# think inside the box

## keep larger objects secure with SmartKey™ Locker Systems

SmartKey Locker systems are the ideal solution for securing, controlling and tracking larger objects. Featuring an intuitive touchscreen interface and enhanced access control integration capabilities, SmartKey Lockers let users manage laptop computers, cash trays and other restricted items efficiently and securely. Lockers can be set up as a personal storage space for one or multiple users, and like all Morse Watchmans solutions, they are customizable and scalable. It's just one more way Morse Watchmans continues to use outside-the-box thinking – right inside the box.

*think inside the box.*

## SmartKey Lockers secure:

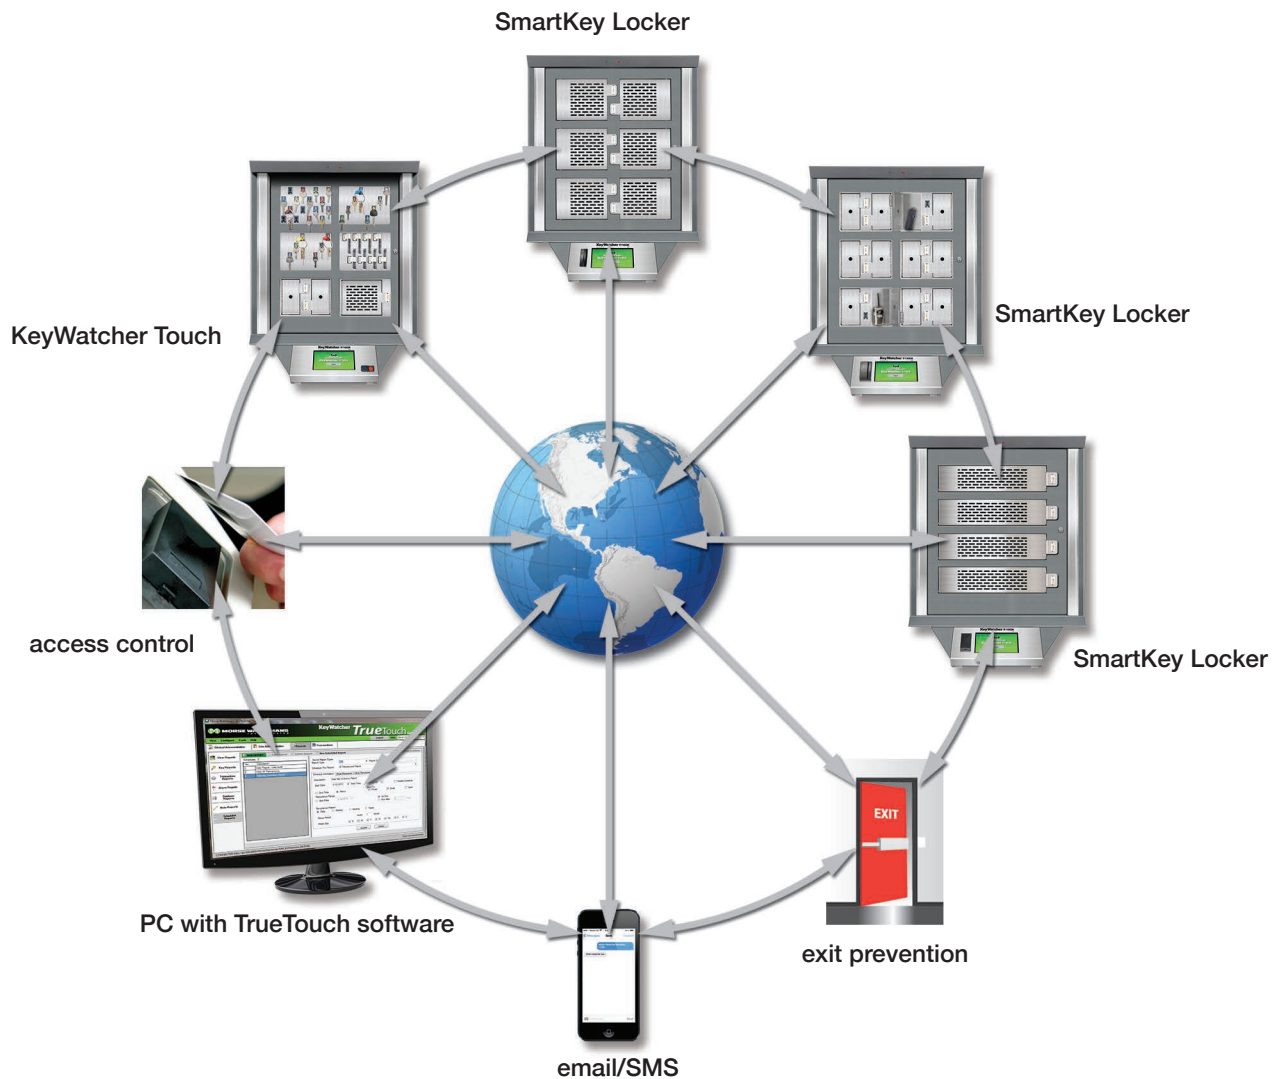

- Laptops/tablets
- Weapons
- Cell phones
- Medications
- Personal items
- Cash trays
- Data terminals
- Hand-held radios

Like all Morse Watchmans asset control solutions, SmartKey Locker systems are engineered for complete interactivity with your other business systems. By designing the KeyWatcher Touch to be integration friendly, Morse Watchmans makes it possible to integrate our system with a wide range of access control systems and other products. For example, by integrating your SmartKey Locker system with your access control system, your access control system will know which users are in the facility and which are not. A user who has taken an object from a SmartKey Locker can be denied egress from the facility until the object is returned – and selected management can be alerted automatically via email or text message if an item has not been returned.

By designing SmartKey Locker systems with the ability to communicate across systems, Morse Watchmans helps our customers maintain best-in-breed security solutions without the need to overhaul or replace costly installations.

SmartKey Locker systems have a built in Ethernet port for network connectivity.

It's easy to expand scalable SmartKey Locker systems as your needs grow. Start with a single cabinet, or configure your system with multiple cabinets. Designed with scalability in mind, each additional unit can be controlled by a single console and monitored by the advanced TrueTouch software.
